22 October 1964

Prof. Joshua Lederburg
716 Alvarado Row
Stanford, California

Dear Prof. Lederburg:

I am taking the liberty of sending you a reprint of a recent paper of mine which I hope will be of interest to you.

Gene Garfield mentioned to me that you were doing some work on compact representations of chemical structures. He spoke, in particular, of what I think he called the Dendral system.

If you are working on this chemical structure problem and are free to disclose your approach, I would be most interested in hearing about it.

Sincerely yours,

Incl:
a/s

S. H. EISMAN
